

Group a Security Role

Grouping allows you to organize and sort the system's roles. This allows users and administrators to view the roles in a hierarchy fashion. It is important to note that rights and privileges do not extend to parent or child roles.

1. To group a set of roles, hover your cursor over Administration, then click System Management.

2. Navigate to the applicable org, then click the role to display its Role Details.
3. Click Choose Role, then select a new parent role.

A screenshot of the 'Role Details' form. The form has a dark blue header with the text 'Role Details'. Below the header, there are three sections: 'Title:' with a text input field containing 'Administrators'; 'Parent:' with a text input field containing 'Roles' and a 'Choose Role' button with a crown icon; and 'Privileges:' with two checked checkboxes: 'Global Administrator' and 'Send Message'.

4. Click Save.
