# Effective Locks

Record locks can have effects on other records in the system. Records that are affected by locks on other objects are said to be "Effectively Locked". You can review a record's lock state by selecting the record in the Structure section then reviewing the Effective Locks in the Lock Details section. Effective Locks are illustrated using disabled checkboxes, which are read-only.

Some lock types have effects on other lock types. Meta Delete locks implicitly activate Delete Locks. In other words, applying the Meta Delete Lock will automatically activate the Delete Lock.
