

Plan Views

Now you are ready to design the interface that your users will utilize to update their plans. Remember, Global AlertLink allows you to design as many views to the plan as needed. Again, think of a plan as a system. A view is simply a window into the data within the plan. You may have unique views for the following:

- Plan Edit View
- Print View
- Quick Plan View
- Business Impact Analysis

To create a custom view, create a new plan/editor form. See [Create a Form](#) for more information. Be sure to create a plan/editor form when creating a new plan.
