

Push Notifications Overview

Currently, the user of the mobile push device is not authenticating (logging in) to GAL to respond to Messages, Task Assignments, Decisions, or Status Changes. Therefore, GAL will not return Status Updates to the user's mobile push device. For example, when you update a Task Assignment, the user will not see the status of the task's progress; only their last response.

Currently, Review Reminders and Form Assignment Notifications will not be delivered to mobile push devices.

The user interface for AlertLink Connect is currently only available in English. Messages and Task Notifications can be sent in any supported language.
