

# Version 8.01 Release Notes

## New Features

- (#1623) Improved the performance of loading and rendering forms that contain report queries.
- (#1693) Added new relationship variables to the Relationship Editor Form including the name of the objects, the relationship type, and the object path.
- (#1696, #2208) The Relationship Builder will auto-generate a new Relationship Editor form and prompt the user to fill it in when a new relationship is created.
- (#2253) Reorganized the indexes on the Hierarchy table.
- (#2488) Added Email Routed, Phone Routed, SMS Routed, and Push Routed statuses for when the device's message is sent to the downstream aggregator.
- (#2495) Reworked the Message Settings (step 3 of sending a message).
- (#2496) Added buffering and improved error handling to Global AlertLinks' inbound response management.
- (#2620) Created configuration settings that control the maximum length of Titles and Descriptions displayed in the User Interface.
- (#2719, #2738, #2854, #2890) Improved the error messages generated in import exception reports.
- (#3013) Added Message Queued Date to Message Reports.

## Bug Fixes

- (#328, #2644) Corrected an issue that was preventing messages marked as Close with Event from closing if the device status was missing.
- (#1316) Users can no longer enter non-numeric values in the Phone ANI field.
- (#1319) Added the missing ability to set the width and height on Edit Variables in the Custom Form Designer.
- (#1581, #1582, #1583, #2896) Security updates.
- (#1931) Fixed a bug that was creating duplicate Review History entries.
- (#2539) Resolved a bug that occasionally caused the oldest device status to appear as the newest.
- (#2593) Custom field data will now save if the field name contains a colon or other special character.
- (#2669) Resolved an issue with opening the Contacts and Resources sections in the Item Picker Advanced Search Module.
- (#2687) Users can now add or change records in a folder with a title containing a colon or other special character.
- (#2688) Fixed an issue that caused PDF forms to export without the .pdf file extension.

- (#2714) Corrected an issue with importing resources that prevented the proper logging of data in the event of a validation error.
- (#2769) Resolved a display issue with vital signs being cut off when the browser zoom setting was set to above 100%.
- (#2772) Fixed an issue where the By Status section of a message's Delivery Summary tab was not displaying.
- (#2792) Resolved an issue that prevented users from exiting the application after clicking the logout button.
- (#2888) Corrected an issue that returned an incorrect count of the number of import rows that contained errors.
- (#2976) Fixed an issue that was causing the custom form designer to load slowly.
- (#3028) Uploading News & Updates or Document records through Internet Explorer 11 will no longer return a JavaScript error.
